

# 2-Post, 11' Bike Shelter

Model: 855020

- Simplified Specifications -

Rev.: 11Apr18

## Description:

With its smaller footprint, this simple but effective shelter can protect 6 to 8 bikes from the worst elements and the mid-day sun. The frame is constructed from rugged tubular steel and the roofing panels are corrugated steel. The modular design is quick and easy to assemble. Greenspoke 2-Post shelters can be linked together (daisy-chained) to provide a protective colonnade of infinite length. The columns can be anchored directly to a reinforced concrete pad or to concrete piers.
