Model: 851250-4A-FT

- General Information -

(See "Specifications" for Full Details & Assembly Information.)

Dimensions shown are in inches.

Preliminary Release: 18Jul24

Description and Use:

The Twin Topper Bi-Level Bike Rack System allows you to park 2 bikes in the space normally required for just 1 bike. The simple Twin Topper System has no moving parts which makes it safe, secure and reliable. The top tier trays are well-suited for Lighter Road or Hybrid City Bikes that must be lifted up into the convenient, self-guiding trays. The bottom tier trays are compatible with Fat Tire Bikes, Large Wheel Mountain Bikes (29" Dia. Max.) or Heavier Standard Bikes. Simply set the front wheel into the tray and push the bike ahead until the rear wheel is securely in the rear chock.

The first component required is the **6-Bike Starter Module** which is fully self-supporting.

You can then add any number of **4-Bike Add-On Modules**. (6 + 4 + 4 + 4 + 4, etc.)

Total Bike Capacity Increments: 6 (Min.), 10, 14, 18, 22, 26, 30, 34, 38, 42, etc.
